

# **GUNNAR SOFTWARE SPT32**

Programmed for success.

# SIMPLICITY ITSELF.

The road to success: install GUNNAR software SPT32 in an instant.  
We even don't charge you for program updates.

## ➤ FROM ONE FRAMER TO ANOTHER

Software is a necessary evil and the prospect of learning a new package can often be daunting. The GUNNAR software package relies on Windows XP design and is simple and logical to use. You don't need to be an IT specialist to cut perfect mats. The program design is simplicity itself. Our built in tutorial will have you designing mats within minutes.

With an eye for details the software has been developed by framers for framers. Our software SPT32 is included in the sales price of a machine and updates are available free of charge.

## ➤ THREE MATCUTTERS, ONE SOFTWARE.

Regardless of which GUNNAR matcutter you decide upon, all are driven by the GUNNAR software SPT32. Even mechanical procedures such as the setting of the blade angle to remove hooking are controlled by the software at a click of the mouse. The GUNNAR SPT32 demonstrates its intelligence by automatic layout optimization. Your most important mat layouts can be called up in seconds. Our aim is to increase speed and efficiency, which in turn will save you money, whilst allowing the machine to perform at its highest level.

The GUNNAR software SPT32 knows no limits to your creativity. You can create your own designs either within SPT32 in our polygon mode or import them quickly and simply via CorelDraw. You will be amazed how easy it is to produce fully automated multi mats of up to seven layers.

Watch out for the mouse: click quickly through the clearly displayed program navigation, which is similar to the well-known Microsoft Office Layout.

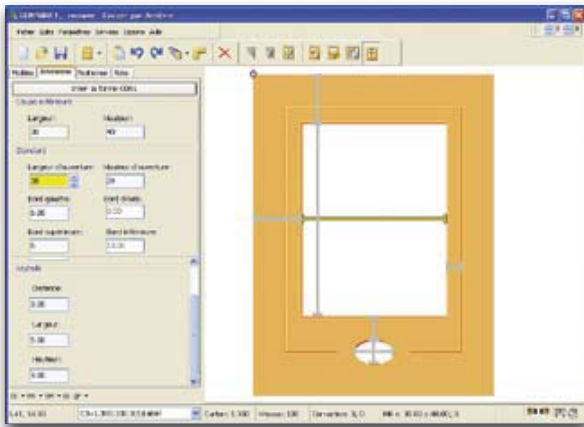

## ❖ HARD FACTS ABOUT THE SOFTWARE

- ❖ The most important figures and over 100 other templates can be called up by a click of the mouse
- ❖ Outside cuts, not just as square or rectangular but in 6 different designs (such as oval, octagon etc.)
- ❖ Cuts from the front and the back
- ❖ Multi mats up to 7 layers, calculated automatically
- ❖ V-groove cuts are possible in all designs
- ❖ Waste cuts are automatically kept to a minimum
- ❖ Your own designs can be easily imported from CorelDraw, although over 300 samples are currently integrated in the software
- ❖ By inputting coordinates in polygon mode single cuts and open v-grooves can be created. It is also possible to create your own designs in this mode
- ❖ Barcode reading facilities
- ❖ Measurement input in cm, mm or inches
- ❖ Built in arrange tools for aligning and placing multi openings

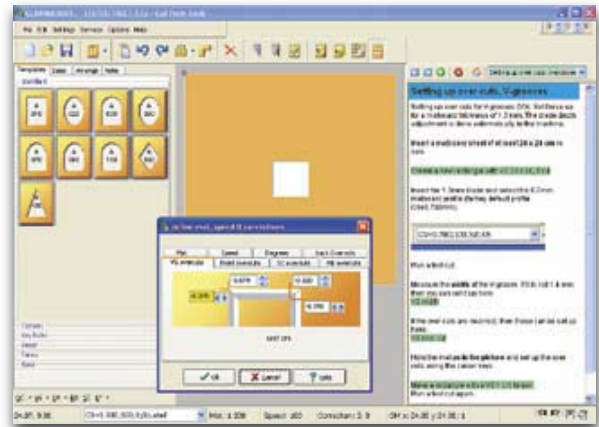

## ❖ EXCELLENCE AS STANDARD

- ❖ Enter four measurements, make three mouse-clicks and your mat is designed and cut
- ❖ Self-explanatory steps in the menus facilitate simple operation
- ❖ Generic keyboard shortcuts as with Microsoft Office
- ❖ Comprehensive help and assistant functions
- ❖ The dynamic screen display reacts immediately to measurement inputs and corrections – («what you see is what you get»)
- ❖ Transfer created data files between different workstations within your workshop
- ❖ Autoload mode accesses externally generated mat data at a click of the mouse, and carries on to the next job. (Batch runs)
- ❖ Available in many languages (German, French, English, Spanish, Czech, Japanese etc.)
- ❖ Free license: Spt32 can be installed on any PC of your choice
- ❖ Free software updates available from our download sites

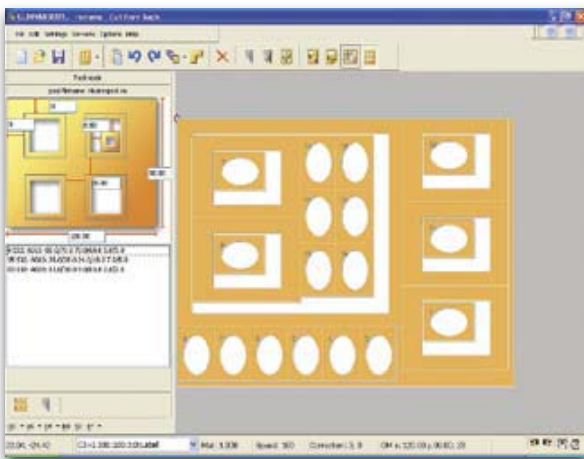

The dynamic screen display reacts immediately to the input of measurements.

Practical program assistants are available to guide you whenever you need help.

Only from GUNNAR: Pool mode optimizes layouts in seconds minimizing wastage.

Use Font mode to cut text or symbols in all available fonts – there are thousands of them.
